```
bool free = true;
sem e = 1, b[n] = ([n] 0); # for entry and delay
typedef Pairs = set of (int, int);
Pairs pairs = \emptyset;
## SJN: pairs is an ordered set \land free \Rightarrow (pairs == \emptyset)
request(time,id):
  P(e);
  if (!free) {
    insert (time,id) in pairs;
                     # release entry lock
    V(e);
                     # wait to be awakened
    P(b[id]);
  free = false;
           # optimized since free is false here
  V(e);
release():
  P(e);
  free = true;
  if (P !=\emptyset) {
    remove first pair (time,id) from pairs;
    V(b[id]); # pass baton to process id
  }
  else V(e);
```
